Application/Control Number: 10/772,227

Art Unit: 1638

## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-81 and 86-93, drawn to isolated nucleic acid sequences, transgenic plants, and plant transformation, classified in class 800, subclass 278, for example.
- II. Claims 82-85, drawn to methods for screening transgenic plants for anthelmintic activity, classified in class 800, subclass 279, for example.

For each of the inventions of Group I and II, Applicant is also required to elect one nucleic acid sequence from SEQ ID NO: listed in the claims and one nucleic acid d from claim 1 part (a) subparts (i) and (ii).

Nucleotide sequences encoding different proteins are structurally distinct chemical compounds that are unrelated to one another, as are different proteins are structurally distinct chemical compounds that are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Each sequence requires an independent search of the sequence databases. Absent evidence to the contrary, each such nucleotide is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1 . 141 (see MPEP 803.04 and 2434). This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

Application/Control Number: 10/772,227

Art Unit: 1638

The inventions I and II are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the specification does not disclose that the isolated nucleic acids and the plant transformation of Group I and the method of screening transgenic plants for anthelmintic activity of Group II can be used together. The plant transformation method of group I requires isolated nucleic acids, vectors and promoters, and transformation and regeneration of the plant cells which are not required by the method of screening of plants of Group II. The transgenic plant that is used in the method of Group II can also be used in other methods such as breeding. Therefore, the two methods are unrelated as they comprise distinct steps and utilize different products that demonstrate that each method has a different mode of operation. Therefore, each method is divergent in materials and steps. For these reasons the Inventions I and II are patentably distinct.

Furthermore, the distinct steps and products require separate and distinct searches. The inventions of Groups I and II have a separate status in the art as shown by their different classifications. As such, it would be burdensome to search the inventions of Groups I-II together.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/772,227

Art Unit: 1638

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## **Contact information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Medina A. Ibrahim whose telephone number is (571) 272-0797. The Examiner can normally be reached Monday -Thursday from 8:00AM to 5:30PM and every other Friday from 9:00AM to 5:00 PM. Before and after final responses should be directed to fax nos. (703) 872-9306 and (703) 872-9307, respectively.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Ann Marie Grunberg, can be reached at (571) 272-0975.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
